Abstract: It is GPS based website that targets the patient category, designed for government hospitals to include a large number of government hospitals, serving patients. Through it, they can review appointments, know them and alert you about them. It will follow your health records, clinic visits, and it will follow regular health check-up appointments along with the doctor's number. It provides medical interviews Psychological gives them a lot of privacy and provides them with time to go to the hospital, some patients are given medicines to the hospital over a certain period, including a month, including three months, and this varies according to each person. The website can also provide these patients with the delivery of their medicines home without going to the hospital. Monitor the patient's condition by GPS.
