Abstract:

As robots are becoming smarter than ever, they are able to operate diverse tasks of human. The International Football Association (FIFA) plans to use such technology in the 2022 World Cup in Qatar, to use it in many areas, including assistance in arbitration, helping visitors to know their seats and smart map of the building, with digital information of the World Cup. In the health field, due to the Covid 19 pandemic, for example, the robots may identify the infected audience and who don't wear mask. In addition, it will contribute in the delivery of food and the provision of hospitality.
